- Prove that
$$x^n + y^n = z^n$$
is not solvable in positive integers if n is at most -3.
- Refute the existence of black holes in less than 140 characters.
- Prove that factorization is easily done via probabilistic algorithms and advance evidence from knowledge of the names of its employees in the seventies that the NSA has known that for 40 years.

1 Refute the existence of black holes in less than 140 characters.
